No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1987 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 34

Number 1, July 1987

WALTER H. REINHART AND SHU CHIEN. The Time Course of Filtration Test as a Model for Microvascular Plugging by White Cells and Hardened Red Cells 1

K. S. HERRMANN, A. RENNEBERG, AND H. KREUZER. Precision Velocimetry with Digital Cross-Correlation for Flow Measurements during Thrombus Growth 13

GERALD A. MEININGER. Responses of Sequentially Branching Macro- and Microvessels during Reactive Hyperemia in Skeletal Muscle 29

T. W. SECOMB. Flow-Dependent Rheological Properties of Blood in Capillaries 46

HAROLD W. BURTON AND JOHN A. FAULKNER. The Response of Arterioles in Skeletal Muscle Grafts to Vasoactive Agents 59

MARK ROSOLOWSKY AND HARVEY R. WEISS. Effect of Blood Coagulation and Platelet Aggregation on Perfusable Capillaries and Arterioles in Ischemic and Nonischemic Myocardium 69

K. S. ZHAO, Z. G. ZHU, G. Y. WOO, AND X. L. HAUN. Effect of Naloxone on Microcirculatory Behavior during Irreversible Hemorrhagic Shock 84

ROBERT E. DRAKE, GLEN A. LAINE, STEVEN J. ALLEN, JEFFREY KATZ, AND JOSEPH C. GABEL. A Model of the Lung Interstitial–Lymphatic System 96

MARCOS INTAGLIETTA AND WILLIAM R. TOMPKINS. Capillary Video Red Blood Cell Velocimetry by Cross-correlation and Spatial Filtering 108

A. A. VAN LAMBALGEN, G. C. VAN DEN BOS, AND L. G. THIJS. Changes in Regional Plasma Extravasation in Rats following Endotoxin Infusion 116

BRIEF COMMUNICATION

M. ZICHE, G. BANCHELLI, G. CADERNI, L. RAIMONDI, P. DOLARA, AND F. BUFFONI. Copper-Dependent Amine Oxidases in Angiogenesis Induced by Prostaglandin E_1 (PGE_1)..... 133

Number 2, September 1987

BJARNE M. IVERSEN AND JARLE OFSTAD. The Effect of Hypertension on Glomerular Structures and Capillary Permeability in Passive Heymann Glomerulonephritis 137

JOSEPH KURANTSIN-MILLS, HELENA M. JACOBS, PANPIT P. KLUG, AND LAWRENCE S. LESSIN. Flow Dynamics of Human Sickle Erythrocytes in the Mesenteric Microcirculation of the Exchange-Transfused Rat 152

M. L. ELLSWORTH, A. LIU, B. DAWANT, A. S. POPEL, AND R. N. PITTMAN. Analysis of Vascular Pattern and Dimensions in Arteriolar Networks of the Retractor Muscle in Young Hamsters 168

David M. Larson, Mary P. Carson, and Christian C. Haudenschild. Junctional Transfer of Small Molecules in Cultured Bovine Brain Microvascular Endothelial Cells and Pericytes 184

N. A. Stathopoulos, P. K. Nair, and J. D. Hellums. Oxygen Transport Studies of Normal and Sickle Red Cell Suspensions in Artificial Capillaries 200

Terrence D. Lagerlund and Phillip A. Low. A Mathematical Simulation of Oxygen Delivery in Rat Peripheral Nerve 211

Michael J. Davis. Determination of Volumetric Flow in Capillary Tubes Using an Optical Doppler Velocimeter 223

F. Vetterlein, A. Pethö, and G. Schmidt. Morphometric Investigation of the Microvascular System of Pancreatic Exocrine and Endocrine Tissue in the Rat 231

Elisabeth Anders, Jens-Uwe Alles, Ulrich Delvos, B. Pötzsch, Klaus T. Preissner, and Gert Müller-Berghaus. Microvascular Endothelial Cells from Human Omental Tissue: Modified Method for Long-term Cultivation and New Aspects of Characterization 239

Brief Communications

Norio Ohshima and Masaaki Sato. Mass Transfer Kinetics from Blood to Lymph in the Mesenteric Microcirculation Studied by the Fluorescent Intravital Microscope Method 250

John E. Bassett and Ralph G. Dacey, Jr. Dilation of Intracerebral Arterioles *in Vitro* by Fatty Acid Contamination in Bovine Serum Albumin 256

Technical Report

A. R. Pries and P. Gaehtgens. Digital Video Image-Shearing Device for Continuous Microvessel Diameter Measurement 260

Number 3, November 1987

Alan C. Groom. The Microcirculatory Society Eugene M. Landis Award Lecture. Microcirculation of the Spleen: New Concepts, New Challenges 269

S. Mirhashemi, S. Ertefai, K. Messmer, and M. Intaglietta. Model Analysis of the Enhancement of Tissue Oxygenation by Hemodilution Due to Increased Microvascular Flow Velocity 290

Guoping Li, James T. Bronk, Kai-Nan An, and Patrick J. Kelly. Permeability of Cortical Bone of Canine Tibiae 302

Hermann Ph. Metzger, Helmut Brüggemann, and Anke Plewnia. The Use of Fluorescent-Protein Conjugates for Staining Brain Capillaries in Hypo- and Hyperthermia (26–42°) 311

G. Pelosi, G. Saviozzi, M. G. Trivella, and A. L'Abbate. Small Artery Occlusion: A Theoretical Approach to the Definition of Coronary Architecture and Resistance by a Branching Tree Model 318

Laurence T. Baxter, Rakesh K. Jain, and Erik Svensjö. Vascular Permeability and Interstitial Diffusion of Macromolecules in the Hamster Cheek Pouch: Effects of Vasoactive Drugs 336

Roger C. Wagner, Ritchie Froehlich, Fred E. Hossler, and S. Brian Andrews. Ultrastructure of Capillaries in the Red Body (Rete Mirabile) of the Eel Swim Bladder 349

Steven D. House and Herbert H. Lipowsky. Leukocyte–Endothelium Adhesion: Microhemodynamics in Mesentery of the Cat 363

Brief Communications

Harvey N. Mayrovitz. An Optimal Flow-Radius Equation for Microvessel Non-Newtonian Blood Flow 380

Geert W. Schmid-Schönbein, Thomas C. Skalak, and Gary Firestone. The Microvasculature in Skeletal Muscle V. The Microvascular Arcades in Normotensive and Hypertensive Rats 385

Information for Contributors

Microvascular Research (MVR) is an international journal dedicated to the dissemination of fundamental information related to the microvascular field.

Submission of Manuscripts. One original and two complete carbon copies should be sent via first-class mail, in flat form, to **Microvascular Research Editorial Office, Dr. David Shepro, 2 Cummington St., Boston University, Boston, Massachusetts 02215.** MVR will not be responsible for manuscripts lost in the mails.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Microvascular Research* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Manuscript Style. Papers should be typewritten, double-spaced on one side of the paper, with wide margins. The manuscript should be divided into the following sections: Abstract, Introduction, Materials and Methods, Results, Discussion, References, and Acknowledgments. The abstract, which will precede each article, should be 225 words or less and should be typed on a separate sheet. In addition the manuscript should include, on separate pages, (1) the complete title with names of authors and affiliations (including ZIP CODE), (2) running title, consisting of no more than 40 characters including spaces, (3) key words that are suitable as **Index Descriptors,** and (4) the address to which proofs are to be mailed.

Tables. Tables are to be typed on separate sheets and numbered with Arabic numerals. Each table should contain an explanatory title that would make reference to the text unnecessary.

Figures. These should be numbered with Arabic numerals and should be mentioned consecutively in the text. Legends are to be typed together on a separate sheet.

Illustrations, drawn with a lettering set, should be in finished form ready for photographic reproduction. Lettering on the original drawing should be large enough (minimum, 4 mm) to be legible after reduction to one-third. Graphs should be plotted with black India ink on light blue coordinate paper, no larger than 8.5 × 11 inches, with coordinates properly labeled; grid lines that are to show in the photoreproduction should be inked in black.

Photographs should be submitted as glossy prints and not marred by staples, paper clips, or pencil marks. For best reproduction of halftones, provide clear, sharp photographs with adequate contrast. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. If this is not possible, please provide unmounted original art. Providing an overlay that indicates the most critical areas of micrographs will also aid in ensuring high-quality reproduction. The dimensions of the printed page are 5 × 8 in. (127 × 203 mm). It is recommended that micrographs be submitted as near as possible to this size so that large reductions will not be necessary.

Illustrations in color can be accepted only if the authors defray the cost.

Footnotes. These should be designated in the *text* by superscript *numbers* and typed on a separate sheet; in the tables by superscript *letters* and typed at the bottom of the table.

Abbreviations. In general these should follow the usage employed by Chemical Abstracts. The *Style Manual,* 1986, of the American Chemical Society is also an acceptable guide.

References. Citations in the text consist of the author's name, and the year of publication in parentheses. The references should be listed alphabetically and should conform to the following style:

GRAYSON, J., AND LEVESON, M. (1985). Functional and morphological changes in the microcirculation of the dog following acute coronary artery ligation. *Microvasc. Res.* **29,** 161–175.

ALLEN, J. C., AND BUKOSKI, R. D. (1982). Current status of vascular smooth muscle subcellular calcium regulation. *In* "Vascular Smooth Muscle: Metabolic, Ionic, and Contractile Mechanisms" (M. F. Crass III and C. D. Barnes, Eds.), pp. 99–134. Academic Press, New York.

Abbreviations of journal names should follow the style of *Chemical Abstracts Service Source Index*, 1985. Unpublished observations and personal communications should be cited in the *text* as such.

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints of each article (without covers) will be supplied free of charge. Additional reprints may be ordered. A reprint form will accompany the proofs.

Brief Communications. Preliminary reports will be reviewed for prompt publication; however, the comments must be restricted to no more than five typewritten pages, including references, tables, and illustrations. No abstract should be included.

To facilitate the publication of manuscripts, especially those papers based upon a new, theoretical concept, the Editors invite each contributor to submit the names of at least three scientists who could review the submitted manuscript.
